## DETAILED ACTION

### *Specification*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 18 – 37 and 39 – 56 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 37 of U.S. Patent No. 6,218,714 B1 in view of Vu et al. (U. S. patent 5,807,771). The U. S. patent 6,218,714 B1 claims the instant application.

However, U. S. patent 6,218,714 B1 does not teach wherein the channel forming region, the source and drain region and the gate electrode are formed on a thin insulating layer.

Vu, in the U. S. patent 5,807,771; figures 1 – 9 and related text disclose forming a CMOS (i.e. FET) wherein the control region 16, the source and drain region, 56 and

Art Unit: 2823

the gate electrode 48 are formed on an thin insulating layer 14 (i.e. SOI) because it is recognized that resistance radiation effects and destruction can be improved by fabricating devices on SOI substrates (column 1).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the device of U. S. patent 6,218,714 B1 on a thin insulator layer (i.e. SOI substrate), since, as disclosed by Vu, it is recognized that resistance radiation effects and destruction can be improved by fabricating devices on SOI substrates.

### ***Response to Arguments***

3. Applicant's arguments filed 12/3/02 have been fully considered but they are not persuasive for the foregoing reasons.

In response to Applicant's argument that the invention is made to suppress short channel effects and not increasing radiation resistance, the fact that Applicant has recognized another advantage, which would flow naturally from following the suggestion of the prior art, cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2823

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
